GO Cards

What is GO Cards?

GO Cards is an online-based service that enables easy ordering of business and personal ID products such as PhotoID cards, access cards and coded key fobs. Through this user-friendly tool, you can efficiently manage and monitor issued ID cards, codings and their validity periods. The service also offers the ability to extract important card and order information.

Data Security & Compliance

The service obviously follows the GDPR recommendations, which means that it is in line with the guidelines and regulations established by the General Data Protection Regulation (GDPR), which gives users peace of mind when it comes to data protection. The service also requires multi-factor login, which further increases security. All data saved in the service is encrypted.

Who is it for?

GO Cards is created for those of you who in your profession need a flexible and simple solution to administer orders for company and personal cards, as well as key fobs and accessories.

GO Cards is ideal for...

...a large organization or a small business, our solution fits a wide range of needs. Typical users include:

- Integrators and OEM Manufacturers
- IT and Security Managers
- HR Professionals
- Business Owners and CEOs
- Facility and Operations Managers
- …and anyone looking for a robust and secure card solution

Available Add-Ons

In addition to personalized cards, we offer a wide range of consumables including:

- Blank cards
- Color ribbons for printers
- Card holders
- Lanyards

Self service

With the self-service feature, you can send an email to one or more employees to invite them to add information for a particular card layout and optionally upload a photo themselves.

When you send an invitation, the employee receives an email with a personal link. The link takes the recipient to a web page where information corresponding to the layout can be added, and a photo can either be uploaded or taken directly on the phone. The image can be adjusted directly on the web page and then the invitation is confirmed. You as the customer/inviter can follow the information in the portal and see when there is a card ready for you to approve. You can also choose to send reminders if an employee has not yet filled in the card information or lost the invitation.

Process

Existing Account

Already signed up for the service? Great, just sign in here and enjoy smooth and easy order process.

Personalized Cards
Carrier of visible and invisible information.

Personalized cards fulfil many functions, partly it is about using the technology in the card for different functions, partly it has to do with the information that is printed on the card. The organization that chooses to have personalized cards with a photograph of the card holder/user has clearly taken a position to show that they have control over who moves inside their premises. The cards make it easy to visually categorize different staff groups, for example regular staff, temporary staff, consultants, cleaners or visitors. Personalized cards are often part of the security policy and are usually combined with visitors having to wear visitor badges clearly visible. If several functions are connected to the cards, the security value is higher, as it is noted more quickly if the card is lost or stolen, and the card can then be quickly blocked in the systems. Some of the most common functions are access to doors when a pass system is installed, registration of time in time and attendence systems, follow me print and logging into the computer.

Atelje (Graphical Design Studio)

Nexus Ateljé helps tailors products to fit the graphical design needs of customers.

Ateljé is a part of the customer service team and works closely with customers to tailor the look of Nexus' products to harmonize with the client brand and style. Most of Nexus' hardware products can be customized with printed or laser engraved logos, colors, patterns, shapes, fonts and security features. Doing so helps the products seamlessly integrate in customers brand identities.

The design process can vary, but typically Ateljé will use information and materials provided by the customer to make a few design proposals, which the customer then is welcome to review and modify. At other times customers reach out to Ateljé with a sketch or a finished idea, and Ateljé will attempt to apply it to the product in question.
Products that can be customized by Ateljé range from cards, carriers, envelopes, keyfobs, lanyards, REX buttons and yoyos to security features like printed security foil.

Keyfobs

If you use contactless technology, you are no longer tied to the traditional card. The contactless technology is found in key fobs, watches and bracelets, among other things. Modern combination fobs also offer the option of having both EM and MIFARE technology in one and the same fob.

KEY FOB BAKELIT PRO

Name	Art.No.
Key fob Bakelit Pro EM numerical order	BO1308-X
Key fob Bakelit Pro EM4200	BO1306-X

Clear disc tag MIFARE Classic EV1 1K, 16mm, Adhesive	BKC2016
Clear disc tag MIFARE Classic EV1 1K, 18mm, Adhesive	BKC2018

Card Accessories

In many workplaces, it is a requirement to wear your Photo ID card visibly. One of the reasons is that everyone should be able to see that the person has authorization to stay on the premises. The card is usually carried in a card holder that is either attached to a clip that is clipped directly to the clothes, or hooked to a lanyard or yoyo. Lanyard or yoyos with your logo are an excellent way to spread your company name. Contact us and we will tell you more about profiled products.

CARD HOLDERS STANDARD

Name	Art.No.

nexus
INGROUPE

Printer as a Service

Nexus offers a service for local production of cards at your premises together with a subscription model of a plastic card printer.

This service is part of Nexus GO Cards, which means that you can choose to let Nexus produce your cards, for example larger batches, or print them yourself at your location.

With our subscription model you can avoid the upfront costs of purchasing a printer. Nexus retains ownership of the printer, and you benefit from minimal downtime and predictable monthly fee that covers maintenance and support.

✔ **Flexible Production**
✔ **Convenient Printer-as-a-Service Model**
✔ **Expert Maintenance**

Plastic Card Printers
Re-Transfer technology

With the Re-Transfer technology, the print quality is fantastic, which makes this technology well suited for Photo ID cards. The printer offers the option of extra protective laminate, which increases the durability of the print. The printing technology also offers the possibility for variables such as UV printing to increase the visual protection of the cards, a holographic laminate makes the card copy-protected and gives it an elegant impression. Re-transfer technology also offers incredible print quality with Over-the-edge printing on the cards. Printing takes place by printing the image from the color band onto a transparent transfer film which is then applied to the plastic card, this also means that this technology is suitable for cards with RFID technology as it can also handle any unevenness in the cards. The transparent film protects the surface of the card from scratching and fading.

Direct to card technology

The colors are each transferred directly to the card individually, in a specific order, for this a high precision is required in the printer so that the colors are not shifted. When you print directly on the card, the color can be perceived as a bit dull. The direct-to-card technology does not offer over-the-edge printing, but a small white line will be visible in the outer area, close to the edge of the card, and if the card is not completely even, there may be white spots as the print head cannot come into contact with the card in these places. Since you print directly on the cards, it is required to protect the printed surface with an overlay or a protective laminate, to prevent scratching and fading of color. However, if you only want to print a Monochrome color, direct to card may be the preferred technology.

Printer Magicard Prima 8

MAGICARD

Advanced Card Printing for Government, Payment and Enterprise Needs

The Prima 8 is a retransfer printer with high resolution for secures card issuance, ideal for Government and Enterprise applications. UV images or text, printed inline, can be augmented with overlaminates for added durability and security.

Desktop Reader

The Gneiss reader comes in many flavours. It supports reading and encoding from RFID chip types such as EM, MIFARE DESFire, MIFARE Classic, etc. The reader can be obtained as an enrollment reader for various systems such as ASSA, RCO, Axema, Siemens/Bewator, Aptus and others. The reader can also be configured to read customer-unique encrypted applications. Connects easily via USB and is plug and play, no drivers needed.
